

SGG VIEWCLEAR® II

*Keep the view clear
and optimise thermal
performance!*

SGG VIEWCLEAR® II

Now you can keep the view clear and enjoy best in class Window Energy Ratings performance.

As legislation has evolved, the demands on thermal performance of windows continues to increase. This, combined with innovations such as triple glazing, present the industry with a challenge – how to deliver windows with exceptional thermal performance without compromising the view – impacted by the build of condensation on the exterior pane of glass. Now, there is a unique solution, SGG VIEWCLEAR® II.

SGG VIEWCLEAR® II is a neutral anti-condensation solution which combats the buildup of condensation – ensuring glass retains its most fundamental function – its clarity and transparency.

Clear and neutral aesthetics in both transmission and reflection and maximises the entry of natural daylight.

In triple glazing, condensation can be present more than 100 days per year (depending on local temperature and humidity conditions). SGG VIEWCLEAR® II can significantly reduce this impact to just a few days per year.

Description

SGG VIEWCLEAR® II must be tempered to activate the coating.

This coating is suitable for use in both double and triple glazing units, positioned on face 1.

Edge deletion is NOT required. The coating is highly durable, enabling ease of processing.

SGG VIEWCLEAR® II is available in jumbosize (PLF), 6000 mm x 3210 mm dimension in 4mm thickness.

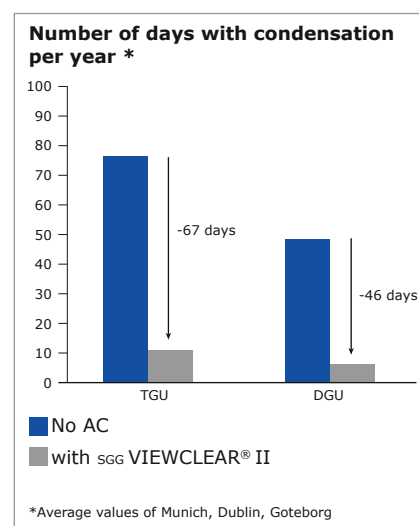

Applications

Residential:

- Windows and Skylights
- Conservatories
- Roof windows

Commercial:

- Façades and large area windows
- Structural glazing
- Overhead glazing
